Final Project - Multi Agent Debate

Chess with LLMs

Project Introduction

The aim of the project is to look at self correction in LLMs and how multi-agent debate can drive the LLM to produce the correct solution.

Multi-agent debate is a framework through which multiple LLMs come together to discuss and provide the correct next logical step.

Project Description

In general, LLMs are not good at playing chess. Chess involves playing a move based on all the previous moves of both parties. LLMs perform well upto certain moves for well known openings in chess. But once it encounters moves which are not documented as such, it starts producing illegal moves. Our aim is to correct this by the use of Multi-agent debate. Two or more LLMs debate amongst themselves to provide a valid next move.

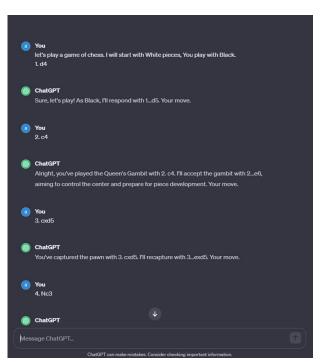

Approach

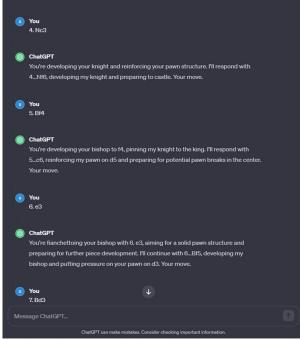

Our approach involved assessing the results across three distinct scenarios:

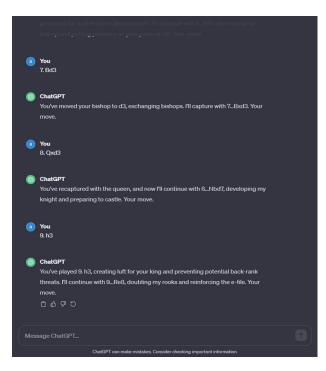

- User vs Player(Single LLM instance)
- 2. User vs Player(First LLM) + Helper(Second LLM)
- 3. User vs Instance1(First LLM) + Instance2(Second LLM) +
 Judge
- 4. User vs Instance1(First LLM) + Instance2(Second LLM) +
 debate in 2 iterations + Judge

(Here, user indicates human playing against the LLMs.)

Execution-1 User vs Player(Single LLM instance)

Execution-2 User vs Player(First LLM) + Helper(Second LLM)

```
1 1. e4 c5 2. Nf3 d6 3. d4 cxd4 4. Nxd4 Nf6 5. Nc3 g6 6. Be3 Ng4 7. Bb5+ Nc6 8. Nxc6 Nxe3 9. Nxd8+ Nxd1

 User: e4
 Player: c5
 Helper: Yes, Black's move c5 is legal.
 User: Nf3
 Player: 2...d6
 Helper: Yes, Black's move d6 is legal.
 User: d4
 Player: 3...cxd4
 Helper: Yes, Black's move cxd4 is legal.
 User: Nxd4
 Player: 4...Nf6
 Helper: Yes, Black's move Nf6 is legal.
 User: Nc3
 Player: 6...g6
 Helper: Yes, Black's move g6 is legal.
 User: Be3
 Player: 6...Ng4
 Helper: Yes, Black's move Ng4 is legal.
 User: Bb5+
 Player: 7... Nc6
 Helper: Yes, Black's move Nc6 is legal.
 User: Nxc6
 Player: 8... bxc6
 Helper: No, Black's move bxc6 is not legal. The legal move for Black in this position would be Nxe3.
 User: Nxd8+
 Player: 9... Nxd1
 Helper: Yes, Black's move Nxd1 is legal.

Analysis

- 1. The Execution 2 and 3 did not particularly improve the results compared to the base model.
- The performance in every scenario is heavily influenced on prompt engineering.
- 3. In case of multiple opinions, the judge seems to get confused and finds it difficult to deduce the correct move.
- 4. "Typical" Moves are Playable because they are not interrupted by the opponent.
- 5. If sufficient tokens are passed, MAD Framework improves the performance with 3-4 more moves but the reasoning might not be correct.
- 6. Luck plays some role!

Challenges faced

- 1. LLMs has by-hearted answers, not understood it. (In context of chess.)
- 2. Using LLM APIs had its own set of challenges
 - a. Delays
 - b. Conversation History
 - c. APIs are not free!
- 3. Token Limitations for the input/output prompts.
